Education

Uppsala University — Uppsala
Masters in engineering, IT sociotechnical systems — *Aug 2015 — July. 2021*

Work Experience

Founding Engineer — Aug. 2025 — Current
Normain AB — *Stockholm, Sweden*

- Designed and implemented autonomous agent systems for intelligent document processing
- Architected and implemented a customer lockbox architecture for a multi tenant platform, supporting logical or physical separation between customers
- Built a document processing pipeline for automated data extraction and analysis
- Configured and managed cloud infrastructure on Azure using Terraform, Kubernetes, PostgreSQL, and Redis
- Rebuilt the CI/CD pipeline to deploy automatically to production, increasing weekly production deploys by over 450%
- Developed backend services in TypeScript powering the core platform

Software Engineer — Jan. 2025 — Aug. 2025
Mentimeter AB — *Stockholm, Sweden*

- Maintained and developed enterprise features in the Mentimeter platform
- Played a big role in translating the Mentimeter platform, providing guidance and developed AI tools for other developers to increase their efficiency

Project Lead & Backend Developer — Jan. 2023 — Jan. 2025
Mevisio AB (Netlight) — *Stockholm, Sweden*

- Built a customer excellence tool for improved data analysis and insights.
- Created a knowledge hub to enhance developer experience and streamline operations.
- Contributed to the Mevisio Platform by implementing new features and technical improvements, driving platform growth.
- Cut CI/CD pipeline time by 75%, speeding up deployments and boosting efficiency.
- Managed Kubernetes manifests across environments, supporting 14,000+ global users.

Backend Developer & DevOps Engineer, Tech Lead — July. 2021 — Jan. 2023
ABC Labs AB (Netlight) — *Stockholm, Sweden*

- Built three LIMS and healthcare integrations to automate orders and result reporting.
- Boosted lab efficiency by automating tasks and adding sanity checks to reduce errors and speed up turnaround.
- Designed an event-driven system using Nest.js and Kafka. This architecture ensured data integrity and system scalability.
- Created and managed Kubernetes manifests for staging and production environments.
- Mentored new developers, conducted interviews, and provided technical support for stakeholders.

Software Engineer — July. 2020 — Mar. 2021
Sun Labs Nordic AB (Devcomp AB) — *Uppsala, Sweden*

- Led the migration of a React web application to a React Native mobile app, enabling access to native features like the camera and notifications.
- Implemented key features such as push notifications and QR code scanning to enhance user experience.

Software Engineer — Apr. 2020 — Dec. 2020
Wines We Want SARL (Devcomp AB) — *Stockholm, Sweden*

- Migrated a web shop from a monolithic PHP backend to a modular frontend/backend architecture.

Software Engineer — Jul. 2020 — Dec. 2020
Prorenata AB — *Stockholm, Sweden*

- Integrated Playwright for end-to-end testing, improving CI/CD reliability and enabling test-driven development.
- Collaborated with the frontend lead and QA team to deliver tailored test automation solutions.

Software Engineer Feb. 2020 — Jul. 2020

Cepheid AB *Stockholm, Sweden*

- Upgraded the C360 system by migrating to the latest Angular version and integrating with a Java Spring Boot API.
- Recognized for strong collaboration, proactive mindset, and effective knowledge sharing across teams.

Skills

- **Programming Languages**: JavaScript, Typescript, Kotlin, HTML/CSS, Java, Flutter, Dart, Terraform, Rust, Ruby
- **Technologies**: AWS, React, Vue, Kafka, GCE, CQRS, gRPC, Websockets, Postgres, OIDC, Rest API, Docker, Kubernetes, Node.js, RabbitMQ, Redis, Terraform, Github, JIRA, React Native, Solid, Angular, Deno, Cloudflare

Projects

Neon Programming language github.com/redsuperbat/neon

Expression based language written in rust

Rustproof github.com/redsuperbat/rustproof

Spellchecker utilizing the language server protocol to spell-check code
